

StockSync Sheets — Ignored List Guide

What this page is for

Review and manage model codes you have chosen to ignore.

Ignored codes are skipped during matching and will not be auto-linked until you remove them.

Key actions

- Search box: Type at least 2 characters to filter the list by model code.
- Export Ignored to CSV: Download the current list for records or audits.
- Remove Selected: Un-ignore the checked model codes so they can be matched again.
- Clear All: Remove the entire ignore list. Use with caution.

Tips & notes

- Ignoring a code prevents auto-matches for that code. It does not change or delete products.
- If you only want to stop one specific model -> product pairing, use the Confirmed Matches tab and choose "Don't auto-match" for that pairing (or your Blacklist/Pairs tool if available).
- You can re-add a code to the ignored list later if needed.

Where to find this page

WooCommerce -> Stock Sync -> Ignored List tab.
