## Introduction:

We had a goal to work on videos specifically and put useful tools into it. We accomplished this goal and produced the video player plugin. This plugin helps you to have a professional player like YouTube and its powerful tools.

## Installation and activation:

WordPress:

- Go to the plugin page
- Click Add and then click Upload and select the plugin file
- Activate it after uploading and extracting

FTP Server:

- Go to wp-content / plugin
- Upload the plugin zip file and extract it
- Go to the plugins page in the admin panel and enable the plugin

## Features:

- Professional player with YouTube skin.
- Create unlimited playlists.
- Supports SRT for subtitles and multiple subtitles in different languages for a video.
- Create comments for each video individually.
- Incoming Traffic Monitoring & Visit Management System.
- Show more videos and suggestions in player.
- Create end screen on each video separately.
- Create cards (video, links, playlists) for each video.
- Professional timeline for editing and managing cards and end screen.
- Multi-quality adjustment for video.
- Increase and decrease video playback speed.
- Features such as (sharing, information, watermark) in the player.
- Custom URL feature for videos.
- Ability to embed videos.
- Ajax action feature for player.
- Visibility control in public and private form for videos.

Version 5.6

The video section is the main part of the plugin that all other sections are related to videos. On this page you can control and manage the added videos.

To add a video, click the  button to open the form to add a new video, or you can use the shortcut key Ctrl + Q to open the form. There are three steps in the video upload form and in these three steps there are fields that all these fields are the same as the video editing section and there is no difference between them.

<input type="checkbox"/>	   	 Public	Dec 30, 2020 Published	0	0	0 - 0
--------------------------	--	--	---------------------------	---	---	-------

There are three buttons   
  
 on each video page. There is a  button to delete the video, a  button to go to the video subtitle page and a  button to edit the video.

## Video Fields:

The fields in the video creation and video editing section are the same. Only in the video creation form, it is designed in three steps, and no field will be different from the editing section.

- Title: Enter a title for the video.
- Description: Enter a description for the video. When the "Show Description" button is activated, the description will be displayed to the user in the settings.
- Thumbnail: Select thumbnail for the video.
- Quality: In order for your video to have multiple qualities, you must specify different files (which have different qualities) in each quality. If you do not have any of these qualities, you must leave them blank. (The system can not create the qualities automatically, so we request them from you)
- Playlist: Select playlist for the video. (Note that playlists must be created before video can be created)
- Tags: Select tags for the video. Singles help the system be more careful in selecting video to suggest to the user.
- Subtitle / Subtitle Management: You can have subtitles in different languages for your video, just click the add button to create a new subtitle for you. In the next step, select your language and click on the file selection button so that you can add the SRT file. This section in the edit is a button that takes you to the subtitle edit page, but in the Add Form you can enter it directly.
- Elements: This section helps you to make suggestions for your video, while your video is playing, that suggestion is displayed to the user at the set time, and you can also set the end screen for your video.
- Visibility: Select visibility (Public / Private) for the video. Private mode can be seen when the user logs in to the site.

# Playlists:

**Your Playlist** [Add Playlist](#)

Published

<input type="checkbox"/>	Videos	Details	Edit
<input type="checkbox"/>		<b>New Movies 2020</b> 2 Video - Dec 30, 2020	<a href="#">Edit</a>
<input type="checkbox"/>		<b>Music Video</b> 4 Video - Dec 30, 2020	<a href="#">Edit</a>

Rows per page: 10 ▾ 1-2 of 2 |< < > >|

A playlist is a collection of videos that are played in sequence and have the ability to loop. You can create unlimited playlists and use its shortcode to display to the public.

To add a playlist, you must click the [Add Playlist](#) button to open the playlist addition form.

Playlist Title:

Public ▾ [Cancel](#) [Create](#)

- Playlist Title: Enter Title for the playlist. (Duplicate names do not cause a problem)
- Visibility: Select visibility (Public / Private) for the playlist. Private mode can be seen when the user logs in to the site.

To insert a video into a playlist, go to the video editing page and select the playlist in the General field tab and save it. If it comes to the playlists page, you will see that it has been added to the playlist. You can also do this when creating a video, just note that the playlist must be pre-created.

# Subtitles:

## Subtitles

Published

<input type="checkbox"/>	Subtitles	Language	Edit
<input type="checkbox"/>	 Selena Gomez - Look At Her Now LYRICS They fell in love one summer A little too wild for each other shiny till it wasn't Feels good till it doesn't It w...	7	<a href="#">Edit</a>

The subtitle feature helps you to put video speeches under the videos in the form of text in different languages. The system does not do this automatically but supports SRT files (subtitles) and you can put your SRT files in different languages on the videos.

To add a subtitle, you must click the [Edit](#) button on the subtitle page to enter the following page.

## #1(Video ID) - Subtitles

Published

Save

**Subtitle**  
Select a SRT file.

[Add Language +](#)

Language  
English

[English-Selena-Gomez-Look-At-He...](#) 

---

Language  
Spanish - español

[Spanish-Selena-Gomez-Look-At-H...](#) 

Click the [Add Language +](#) button to create a new subtitle, and for each subtitle you must select a language, and click the [Select File](#) button to select your SRT (subtitle) file. You can delete that subtitle by clicking  .

[CANCEL](#) [SEND](#)

By clicking the [REPLY](#) button, you can reply to users and send or cancel it using the [SEND](#) and [CANCEL](#) buttons. You can use different emojis to create a comment or reply, but there are some emojis that can not be sent.

# Analysis:

## Analytics

General

In the professional version of this plugin, there is also an analysis feature that displays your visit statistics and incoming traffic for the video.

Visit statistics are available in three modes: daily, weekly and last 28 days.

Traffic helps you to view the most viewed videos and statistics in different modes. Inbound traffic is displayed in different modes of Page / Post, Embed, Suggestion and Playlist. If you use Shortcode or widgets in Custom posts, it calculates and displays incoming traffic separately.

## Settings:

In this form you can set settings for Front-End and Back-End. The settings are in three tabs: General, Upload Defaults and Player, each of which is described below.

## General:

Setting	
General	<input checked="" type="checkbox"/> Video traffic control. Includes: (number of visits, pages, suggestion and embeds)
Upload Defaults	<input checked="" type="checkbox"/> Show alert if video is missing, deleted or private
Player	<input type="checkbox"/> Disable ajax

[CANCEL](#) [SAVE](#)

- Video Traffic Control: Record incoming visits and traffic.
- Show alert if video is missing, deleted or private: If your video is in three modes: Deleted, Private and Missing, it will display a message to users.
- Disable Ajax: All Ajax events will be linked.

## Upload Default:
