Videojuicer for Wordpress Plugin , Version 1.3.0

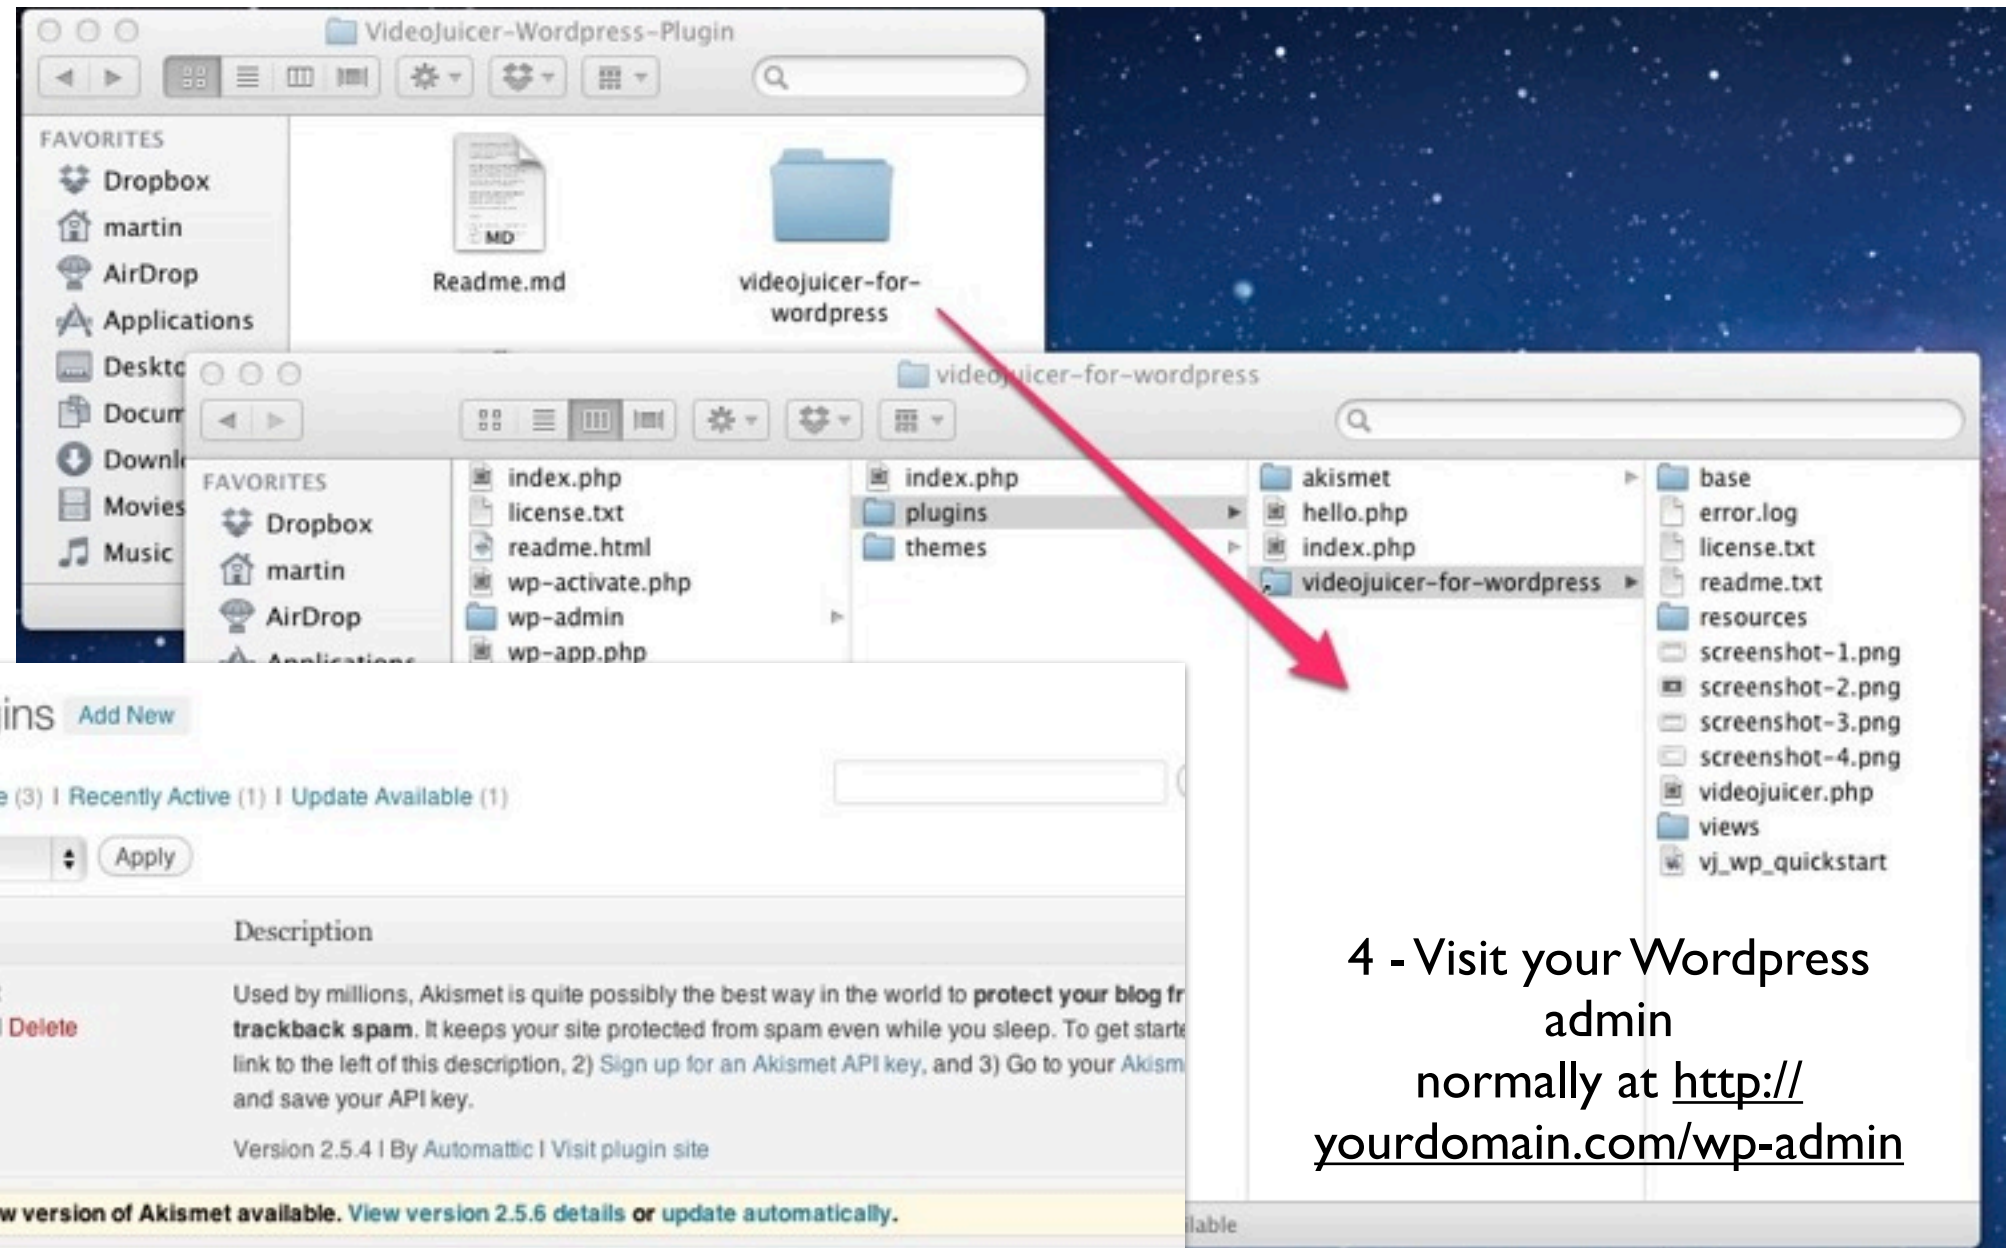

WORDPRESS

Visual Quick Start Guide

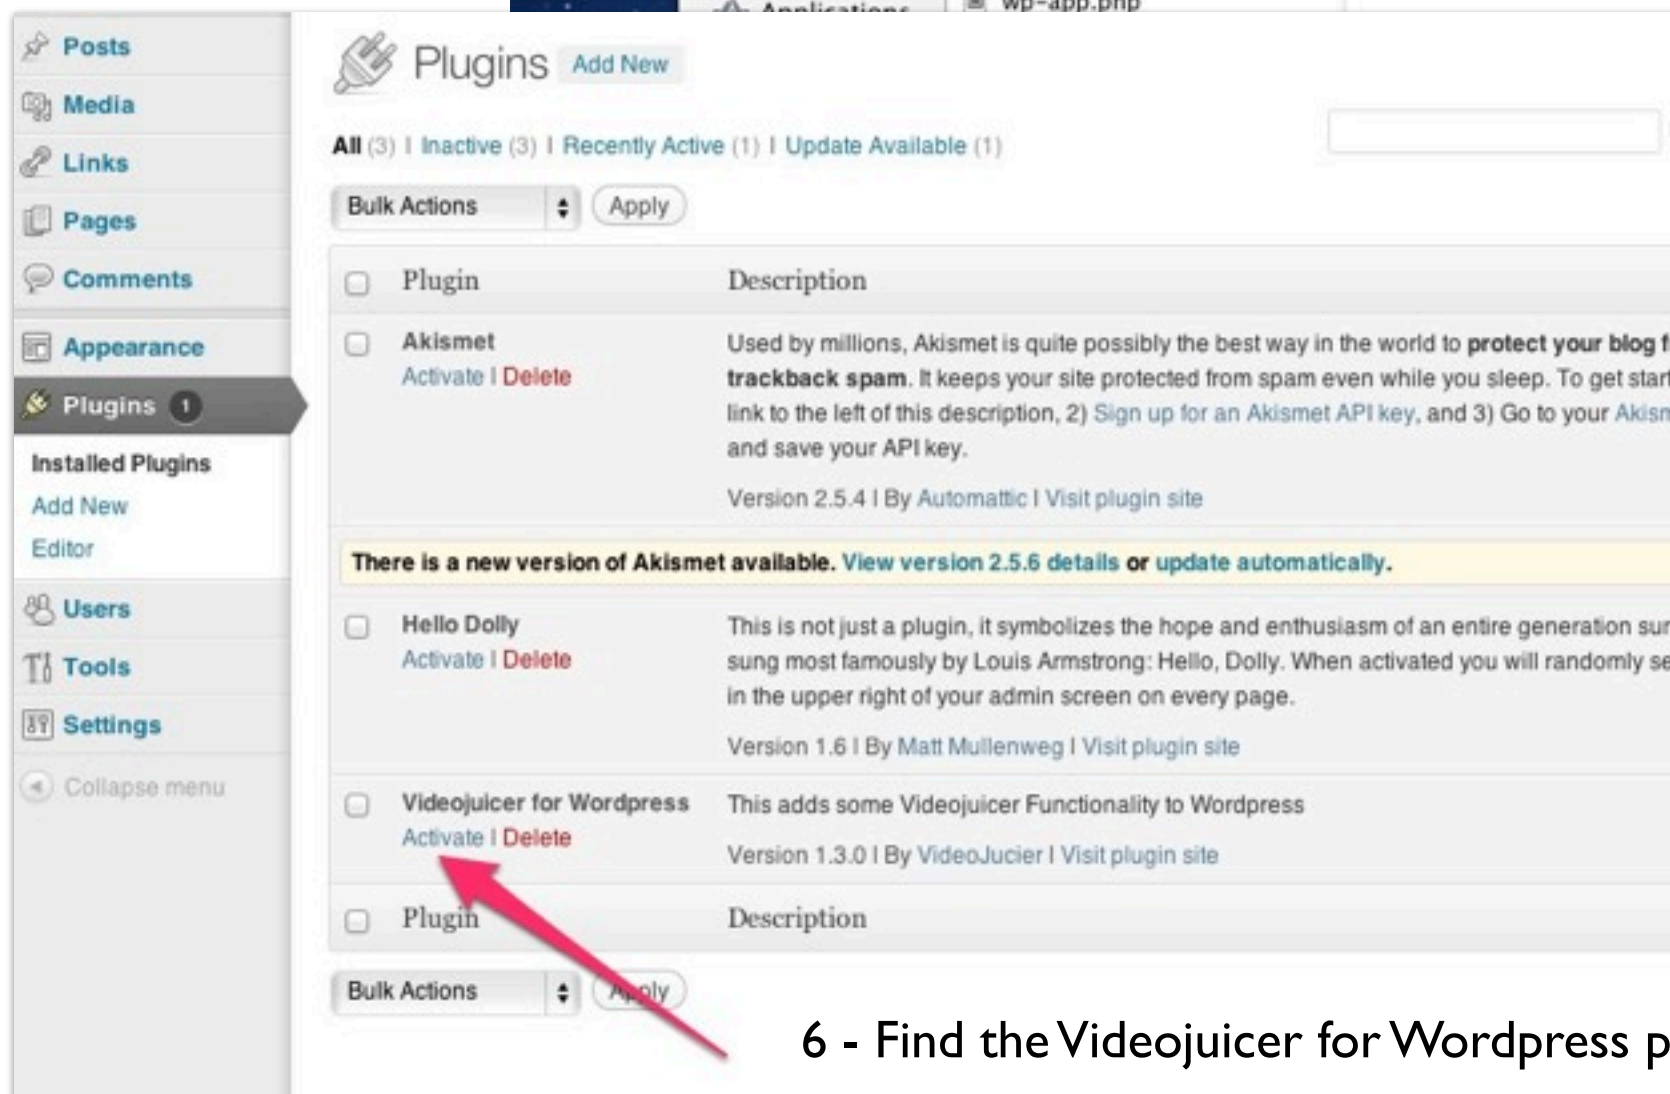

Installing

- 1 - Download our Wordpress plugin from (<https://github.com/videojuicer/VideoJuicer-Wordpress-Plugin/zipball/master>)
- 2 - extract the zip file

- 3 - copy or upload the videojuicer-for-wordpress folder to {Wordpress}/wp-content/plugins

- 4 - Visit your Wordpress admin normally at <http://yourdomain.com/wp-admin>

- 5 - Click the plugins menu on the left of the screen

- 6 - Find the Videojuicer for Wordpress plugin , and click Activate

Configuring

These options allow you to automatically show some metadata under the video.

Please note: this metadata must be stored by Videojuicer

Your seed name, if you are unsure as to what this is please contact Videojuicer.

The default dimensions that the video needs to be embedded at.

Whether you want to include Facebook Open Graph tags and Oembed tags.

Please note: These settings may not work with other Facebook plugins installed.

Don't Forget to Save

The screenshot shows the 'Settings' page of the Videojuicer WordPress plugin. The left sidebar contains a menu with 'Settings' highlighted. The main content area is divided into 'Account Details' and 'Settings' sections. In 'Account Details', the 'Seed ID' field contains the text 'demo'. In the 'Settings' section, there are three checkboxes: 'Show Title', 'Show Author', and 'Show Description', all of which are unchecked. Below these is the 'Default Embed Dimensions' section with 'Width' and 'Height' input fields. The 'Facebook' section has two checked checkboxes: 'Add the facebook opengraph data.' and 'Add the oembed data.'. At the bottom of the settings area is a 'Save Changes' button. A red arrow points from the 'Seed ID' field to the text 'Your seed name, if you are unsure as to what this is please contact Videojuicer.'. Another red arrow points from the 'Show Title' checkbox to the text 'These options allow you to automatically show some metadata under the video.'. A third red arrow points from the 'Width' and 'Height' input fields to the text 'The default dimensions that the video needs to be embedded at.'. A fourth red arrow points from the 'Add the facebook opengraph data.' checkbox to the text 'Whether you want to include Facebook Open Graph tags and Oembed tags.'. A fifth red arrow points from the 'Add the oembed data.' checkbox to the text 'Please note: These settings may not work with other Facebook plugins installed.'. A sixth red arrow points from the 'Save Changes' button to the text 'Don't Forget to Save'.

Videojuicer for Wordpress Plugin , Version 1.3.0

Usage

When creating a new post, you will now see the Videojuicer tool icon in the toolbar

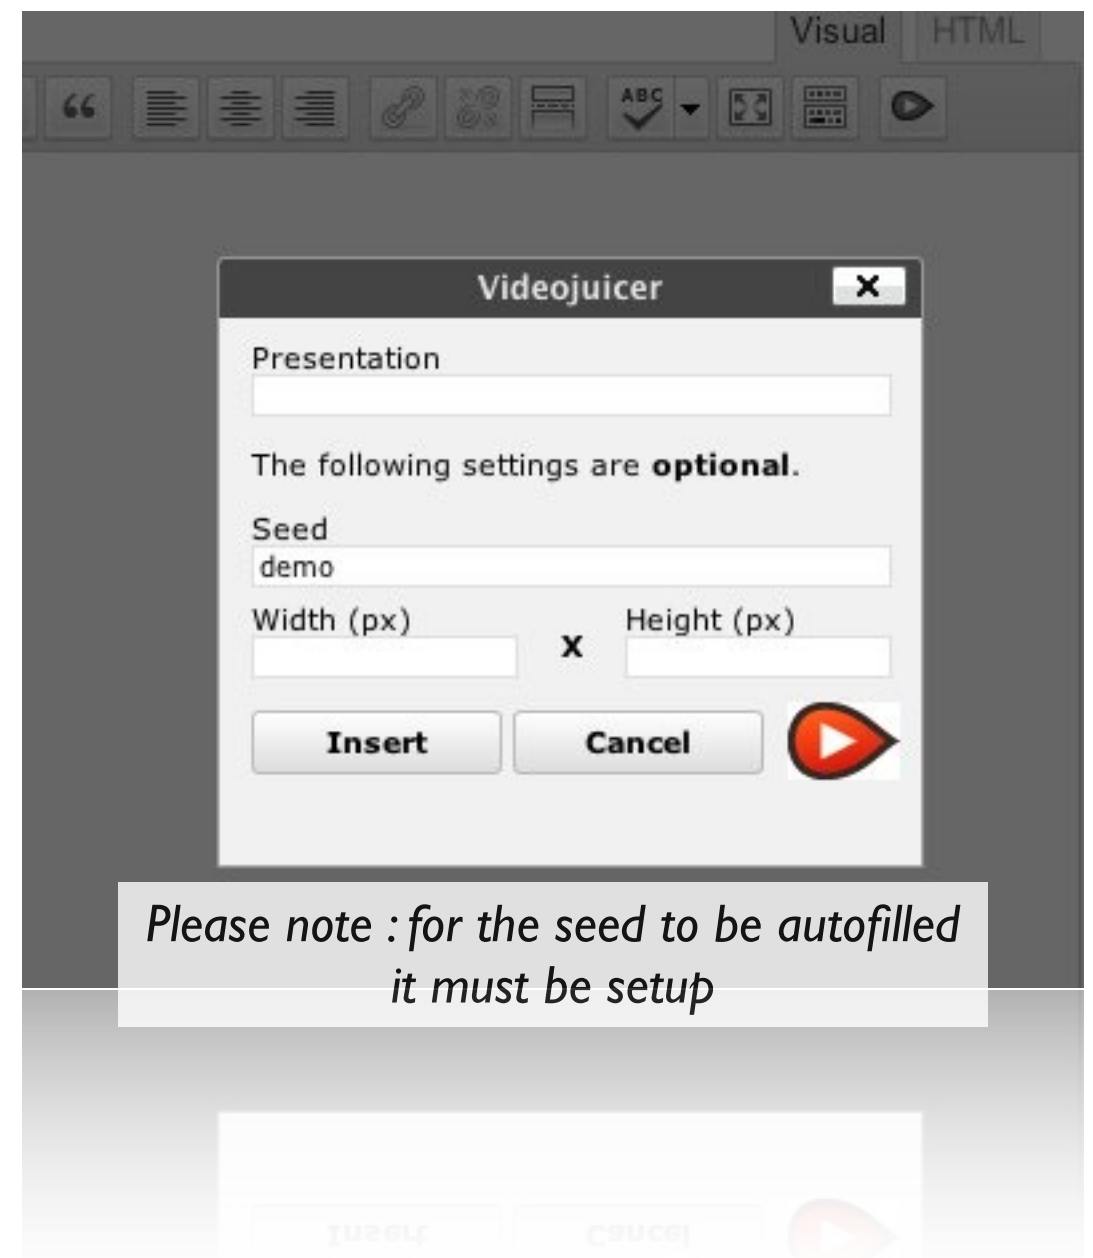

When you click it, you will see our easy to use dialogue. Simply enter the presentation Id under presentation. You can also change the width , height and seed if needed

After you have pressed ok on the dialogue it will automatically insert the short code , this is link to where your presentation is. The presentation will automatically be insert into your post when someone views it.

Don't be concerned if your shortcode doesn't look the same as above. depending on the settings and options you selected it will change.

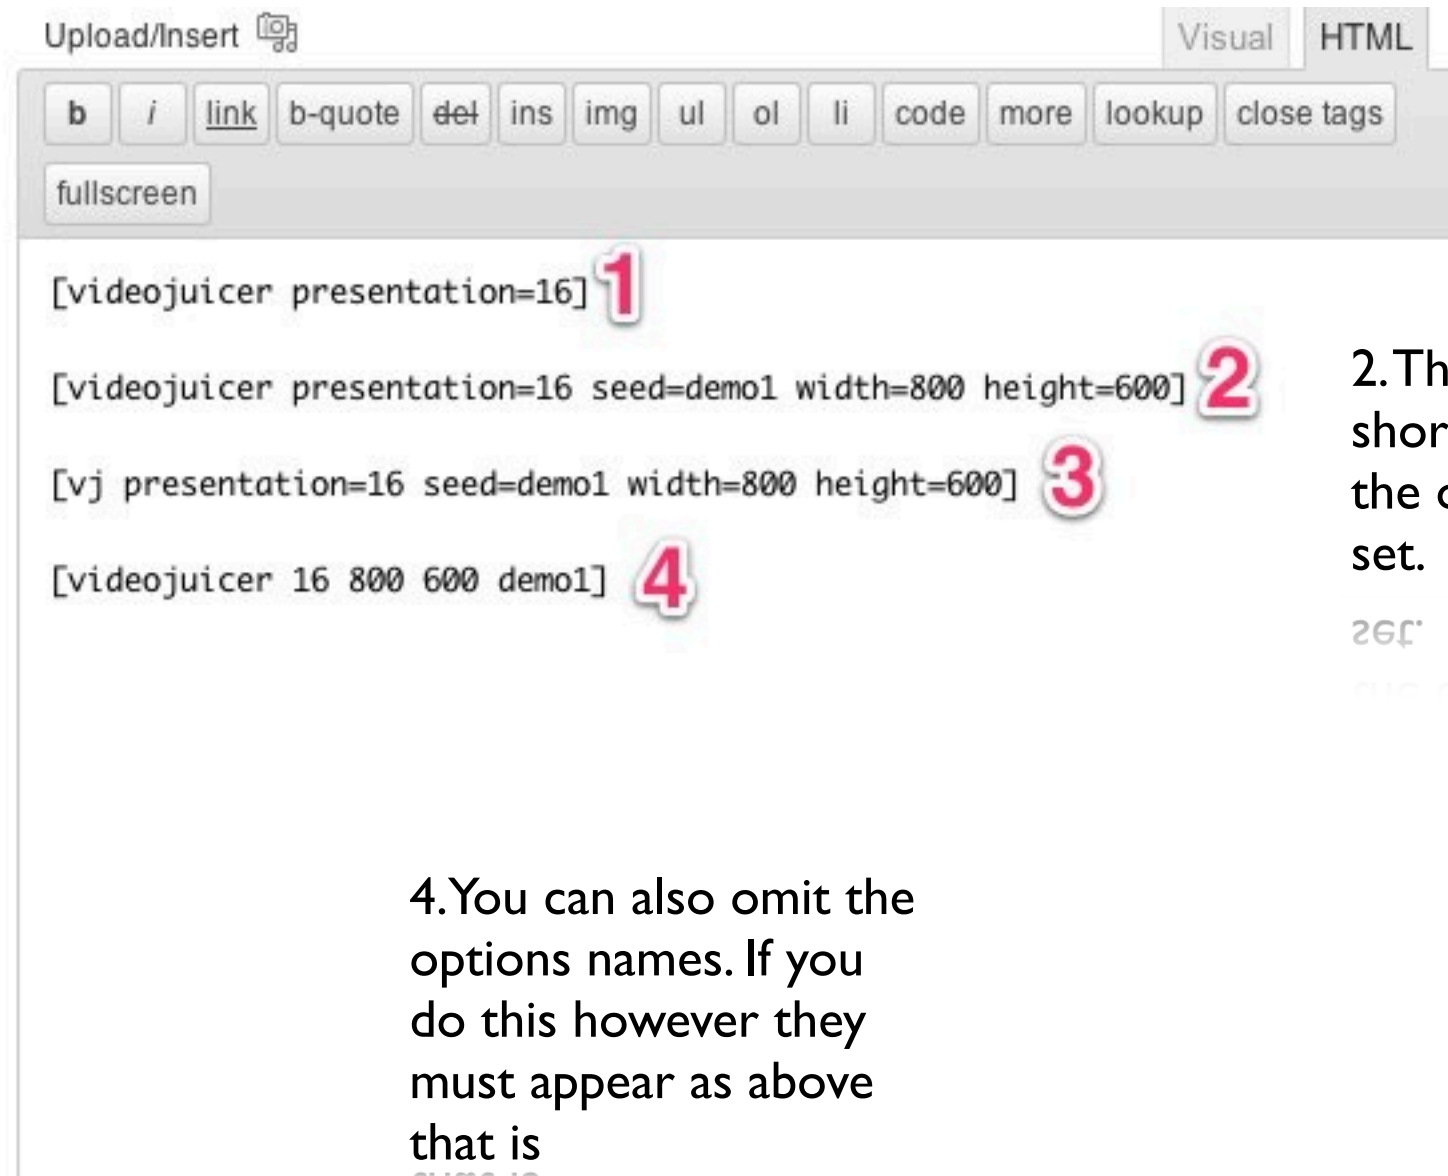

Advance Usage

If you are an advance Wordpress user , you may want to put the shortcodes in manually

1.This is the basic shortcode that we saw before. As long as the seed is setup in the configuration this is all you need.

3. If you want or need you can simply use “vj” instead of “videojuicer”

2.This is a full shortcode showing all the options that can be set.

4.You can also omit the options names. If you do this however they must appear as above that is

[videojuicer {presentation id} {width} {height} {seed}]
